

Project *Spotlight*

MULTICARE MILGARD PAVILION: TACOMA, WA

The Multicare Health System's new Milgard Pavilion in Tacoma, Washington, is an emergency room wing with 77 patient exam and treatment rooms. It has two floors that address the unique needs of adults and pediatric patients. In addition, the Multicare Regional Cancer Center has been expanded threefold.

BUILDING CHALLENGE:

With time a major constraint, everything had to go up quickly and efficiently, even the doors. The doors had to provide a welcome atmosphere and make the patients feel like they were at home and not a hospital, especially in the Multicare Regional Cancer Center.

VT'S CONTRIBUTION:

VT provided about 100 doors with all the needed hardware already installed. This saved the builders roughly 100 hours, or about two weeks of man-hours. All doors arrived ready to mount and beautify the building.

- All doors needed to enhance a welcome feeling enhancing patient privacy.
- Many of the doors chosen for this project are fire-rated for up to 90-minutes.
- All doors arrived ready to mount without the hassle of installing hardware.
